In today's knowledge-driven world, reading is more important than ever before. Students need to be able to read and understand complex texts in order to succeed in school, college, and careers. However, not all students come to school with the same reading skills. Some students may struggle with reading comprehension, while others may have difficulty with fluency or vocabulary.

The knowledge-driven reading grades are designed to help teachers identify students who are struggling with reading and provide them with the support they need to succeed. The grades are based on a student's ability to read and understand complex texts.

The Knowledge-Driven Reading Grades

The knowledge-driven reading grades are divided into three levels:

- **Level 1:** Students at this level are able to read and understand simple texts. They can identify the main idea of a text and answer basic questions about the text.
- **Level 2:** Students at this level are able to read and understand more complex texts. They can identify the main idea of a text, answer more complex questions about the text, and make inferences about the text.
- **Level 3:** Students at this level are able to read and understand very complex texts. They can identify the main idea of a text, answer complex questions about the text, make inferences about the text, and evaluate the text.

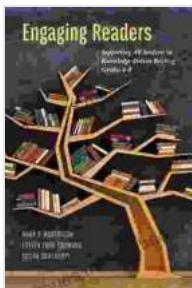

Supporting All Students in Knowledge-Driven Reading Grades

There are a number of things that teachers can do to support all students in knowledge-driven reading grades. These include:

- **Providing explicit instruction in reading comprehension strategies.** Students need to be taught how to use reading comprehension strategies, such as previewing the text, making predictions, asking questions, and summarizing the text. These strategies can help students to understand the text better and remember what they have read.
- **Providing students with opportunities to practice reading complex texts.** Students need to practice reading complex texts in order to develop their reading comprehension skills. Teachers can provide students with opportunities to read complex texts in class, at home, and in extracurricular activities.

- **Providing students with feedback on their reading comprehension.** Students need feedback on their reading comprehension in order to improve their skills. Teachers can provide feedback on students' reading comprehension through written comments, oral feedback, and self-assessment.
- **Creating a positive and supportive learning environment.** Students are more likely to succeed in reading when they feel supported and encouraged by their teachers and peers. Teachers can create a positive and supportive learning environment by providing students with a safe and comfortable place to learn, by being patient and understanding, and by celebrating students' successes.

The knowledge-driven reading grades are an important tool for teachers to use to identify students who are struggling with reading and provide them with the support they need to succeed. By providing explicit instruction in reading comprehension strategies, providing students with opportunities to practice reading complex texts, providing students with feedback on their reading comprehension, and creating a positive and supportive learning environment, teachers can help all students to achieve success in reading.
